

Researcher's Night - 2016

Last Friday night in September is dedicated again to curiosity for the sciences: Researchers' Night is a popular pan-European event giving the opportunity to meet science and have a glimpse behind the scenes through "fun" activities.

Since this was not the night of boring lectures our Department offered spectacular, mysterious, colourful, fragrant, tasty and interesting programs. Almost half thousand visitors attended our program.

Stipendium Hungaricum Scholarship holder PhD students in our Department

The core mission of the Stipendium Hungaricum Scholarship programme is to increase the number of foreign students in Hungary and to encourage Hungarian higher education institutions to attract top foreign students.

In September two scholarship holders, Bayar Chuluunbaatar (Mongolia) and Javad Mottaghipisheh (Iran) have started their doctoral studies in our Department.
